

Bamboo sheets and cushion covers

The natural wicking fabric that helps to keep you cool

This natural eco-friendly textile has both anti-bacterial and anti-fungal properties so stays "fresh" for longer. It's smooth, round fibres are knitted in to a silky super soft fabric for a luxury feel.

Bamboo fibres have a hollow tube like construction so they tend to wick moisture away from the skin aiding evaporation and keeping the skin cool and dry, (Bamboo can hold more than 3 times its own weight in water).

Our latest bamboo fabrics can be washed at 60°C and tumble dried for faster turnaround.

This latest Bamboo is used for our standard sheets and pillow covers. For still greater thermal stabilisation you may want to consider Coolover as an alternative.

Bamboo or Coolover?

Best for:

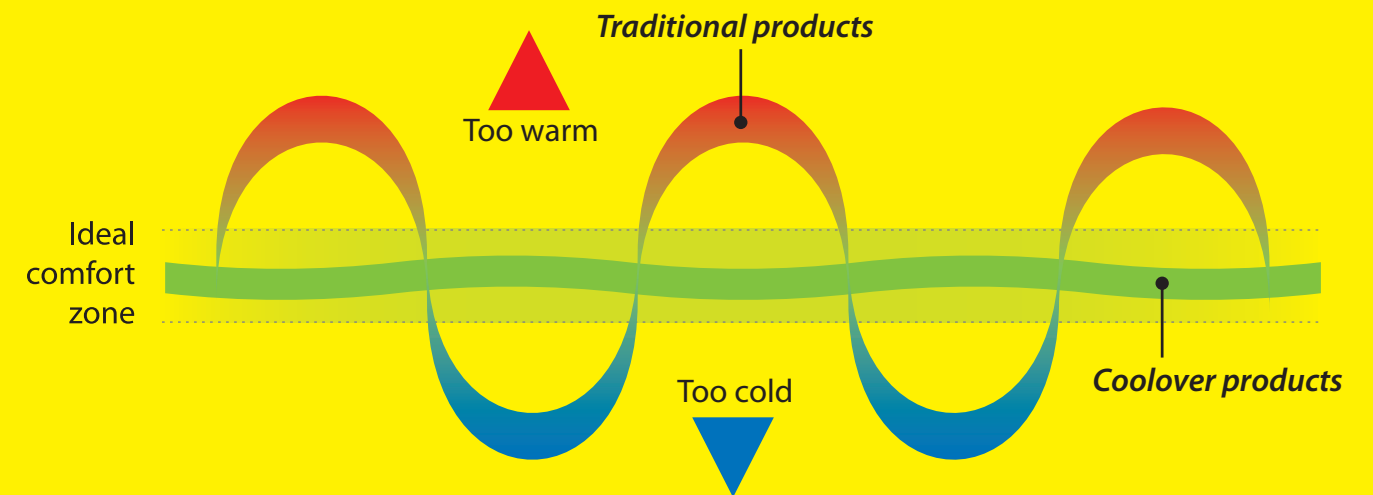

Temperature control	Coolover
Wicking	Coolover or Bamboo
Use as a head pillow (respiratory safety)	Coolover
60° Wash and tumble dry	Bamboo

Our Bamboo fabrics now have double patented Purotex technology. Purotex inhibits the development of noxious bacteria and cleans up dust mite allergens resulting in a better night's sleep. Our wipe down covers also have bacteriastatic properties.

CoolOver® and thermal comfort

CoolOver fabrics can be used instead of our Bamboo to enhance thermal comfort by working right up close. This all new soft feel Hypo Allergenic fabric contains tiny Omnitherm microcapsules; these absorb excess heat when the body is hot and release it back when the body cools to maintain a more even temperature for a better night's sleep. Having the Omnitherm embedded in the fibres themselves, rather than being in a separate inner layer, gets them closer to the skin to offer our most effective temperature controlling fabric to date.

CoolOver® sheets keeps you dry

Coolover has a 3D "spacer" knit which allows air to move more freely keeping you cooler as sweat can more easily evaporate and drier as moisture is moved away from the skin.

CoolOver® on your pillow

Should you turn into the pillow, Coolover covers have excellent air permeability so reduce the severity of respiratory distress. Inherent free draining characteristics allow any fluids which may otherwise cause redness or rashes to drain away from the skin, (Coolover cushion covers replace our earlier Safetysleep® product and can be fitted to any of our Lowzone cushions).

Cooler accessories

Not only is Coolover available for sheets and covers, it is now used as the standard liner in our soft knee blocks and the facing of our bracket pads as well as in our Airmantle.
